EDUCATION

Master of Science, Computer Science University of Florida Gainesville, FL	Dec 2024
Relevant coursework: Advanced Data Structures, Analysis of Algorithms, Software Engineering, Human Computer Interaction, Distributed Operating Systems, Computer Networks, Computer Information Security.	
Bachelor of Technology, Computer Science Bennett University Delhi, India	May 2023

WORK EXPERIENCE

Software Development Engineer Greenstand Remote, United States	Jan 2025 – Present
- Designed and implemented MySQL database architecture with Node.js and Sequelize ORM, creating optimized table structures and data relationships for the Next.js-based Treetracker Wallet Web App. - Built 9 RESTful APIs with Express.js that support secure token management features within the application.	
Software Developer Intern Superstars, Inc. Remote, United States	Aug 2024 – Dec 2024
- Developed 10+ responsive front-end components for the web application with Angular, HTML, CSS, and TypeScript, ensuring seamless integration with the backend through comprehensive API testing of 14+ endpoints with Postman. - Collaborated with a cross-functional team of 5 members, driving 3 major product improvements that increased user engagement by 18% through implementation of key features identified in weekly sprint planning. - Implemented basic Cypress tests for 3 key user workflows (authentication, profile management, content submission) alongside the QA team to increase automated test coverage of critical frontend features. - Built 6 reusable video components using MediaRecorder API and WebRTC that significantly reduced code duplication by 30% across video features used on 12+ pages, and integrated AWS CloudFront for optimized video delivery.	
Cloud Engineer Intern Mactores Remote, India	Mar 2022 – Jun 2022
- Optimized client AWS costs by 20% through right-sizing analysis and resource recommendations across 3 accounts. - Implemented environment-specific deployment logic in GitHub Actions for AWS Lambda functions, reducing deployment errors by 25%. - Assisted cloud engineering team in migrating 2 legacy applications to AWS, helping implement load-balanced, auto-scaled infrastructure that reduced server crashes by over 14%.	
Research Assistant Bennett University Remote, India	Nov 2021 – Mar 2022
- Implemented ensemble models (Random Forest, XGBoost) for COVID-19 transmission analysis, improving prediction accuracy from 73% to 85% using cross-validation by optimizing feature selection and model parameters. - Streamlined data processing using Python Pandas scripts, reducing manual Excel-based analysis time by 25%.	

VOLUNTEER EXPERIENCE

Software Developer Twilight (University Startup) Website	Sept 2024 – Jan 2025
- Built interactive Angular website with dynamic UI components and implemented a hybrid MySQL-MongoDB architecture. - Implemented Redis pub-sub architecture to trigger Brevo email workflows on signups, cutting notification delay by 40%.	

TECHNICAL SKILLS

Languages: C++, Python, TypeScript, JavaScript, Go, SQL
Web Technologies: HTML5, CSS3, Angular, React.js, Next.js, Redux, Node.js, Express.js
Databases: MySQL, PostgreSQL (SQL), MongoDB, Redis (NoSQL)
Tools & Cloud Technologies: Git, Docker, Jenkins, CI/CD, AWS, Microsoft Azure
Certifications: AWS Certified Cloud Practitioner, Microsoft Certified Azure Administrator Associate (AZ-104)

PROJECTS

GatorHive React.js, Node.js, AWS RDS, MySQL, AWS S3, AWS EC2, Git GitHub	
• Developed a web application that simplifies event discovery and promotion on campus for University of Florida students. • Designed a responsive interface with React.js utilizing modern UI patterns and component reusability. • Built a scalable backend using Node.js and Express, integrating MySQL for efficient relational data management, AWS S3 for reliable image storage, handling images with optimized upload and retrieval processes. • Deployed it on AWS EC2 infrastructure via PM2 to ensure scalability and high availability for the users.	
GatorSwamps React.js, Go, MongoDB, Git GitHub	
• Built a housing marketplace platform with React.js and Go for streamlining the apartment search process. • Implemented a NoSQL database architecture with MongoDB for efficient storage and JWT with role-based access control. • Created a search functionality with filtering options for distance from campus and amenities to enhance user experience.	

ACHIEVEMENTS

- Secured a scholarship of \$8000 for my master's program, in recognition of exceptional academic performance.
- One of the 11 students out of 500+ applicants to receive a US\$17000 Scholarship for bachelor's degree.
