EDUCATION

Master of Science, Computer Science | University of Florida | Gainesville, FL | GPA: 3.5/4.0 Dec 2024

- **Relevant coursework:** Advanced Data Structures, Analysis of Algorithms, Software Engineering, Human Computer Interaction, Distributed Operating Systems, Computer Networks, Computer Information Security.

Bachelor of Technology, Computer Science | Bennett University | Delhi, India | GPA: 3.5/4.0 May 2023

WORK EXPERIENCE

Software Development Engineer | Greenstand | Remote, United States Jan 2025 – Present

- Designed and implemented MySQL database architecture with Node.js and Sequelize ORM, creating optimized table structures and data relationships for the Next.js-based Treetracker Wallet Web App.
- Optimized database query performance by implementing composite indexes on frequently queried columns reducing wallet transaction retrieval API response time from **850ms to 320ms** through query analysis and **EXPLAIN** plan optimization.
- Engineered a caching layer by integrating Redis with MySQL to offload redundant read operations, implementing event-driven invalidation that reduced database load and improved scalability.
- Created end-to-end tests for registration using **Gherkin** scenarios and **WebDriverIO**, connecting existing frontend and backend test specifications.

Software Developer Intern | Superstars, Inc. | Remote, United States Aug 2024 – Dec 2024

- Developed **10+ responsive front-end components** for the web application with Angular, HTML, CSS, and TypeScript, ensuring seamless integration with the backend through comprehensive API testing of **14+ endpoints** with Postman.
- Collaborated in agile development environment with a cross-functional team of 5 members, participating in weekly sprint planning sessions, driving 3 major product improvements that increased **user engagement by 18%**.
- Built **6 reusable video components** using MediaRecorder API and WebRTC that significantly reduced **code duplication by 30%** across video features used on **12+ pages**, and integrated AWS CloudFront for optimized video delivery.
- Implemented basic Cypress tests for 3 key user workflows (authentication, profile management, content submission) alongside the QA team to increase automated test coverage of critical frontend features.

Cloud Engineer Intern | Mactores | Remote, India Mar 2022 – Jun 2022

- Optimized client **AWS costs by 20%** through right-sizing analysis and resource recommendations across 3 accounts.
- Implemented environment-specific deployment logic in GitHub Actions for AWS Lambda functions, reducing **deployment errors by 25%**.
- Assisted cloud engineering team in migrating 2 legacy applications to AWS, helping implement load-balanced, auto-scaled infrastructure that reduced **server crashes by over 14%**.

VOLUNTEER EXPERIENCE

Software Developer | Twilight (University Startup) | [Website](#) Sept 2024 – Jan 2025

- Built interactive Angular website with dynamic UI components and implemented a hybrid MySQL-MongoDB architecture.
- Implemented Redis pub-sub architecture to trigger Brevo email workflows on signups, cutting **notification delay by 40%**.

TECHNICAL SKILLS

Languages: C++, Python, Java, TypeScript, JavaScript, Go, Bash

Frameworks & Web Technologies: HTML5, CSS3, Angular, React.js, Next.js, Redux, Node.js, Express.js

Databases: MySQL, PostgreSQL (SQL), MongoDB, Redis (NoSQL)

AI & Development tools: Machine Learning, GitHub Copilot, Copilot Studio, Cursor, Prompt Engineering, Multi-Agent Systems

Tools & Cloud Technologies: Git, Docker, Jenkins, CI/CD, AWS (RDS, S3, EC2, Lambda, CloudFront), Microsoft Azure

Certifications: AWS Certified Cloud Practitioner, Microsoft Certified Azure Administrator Associate (AZ-104)

PROJECTS

GatorHive | React.js, Node.js, AWS RDS, MySQL, AWS S3, AWS EC2, Git | [GitHub](#)

- Developed a responsive web application with React.js to simplify event discovery and promotion for UF students.
- Built a scalable backend using Node.js and Express, integrating MySQL for efficient relational data management, AWS S3 for reliable image storage, handling images with optimized upload and retrieval processes.
- Deployed it on AWS EC2 infrastructure via PM2 to ensure scalability and high availability for the users.

GatorSwamps | React.js, Go, MongoDB, Git | [GitHub](#)

- Built a housing marketplace platform with React.js, Go and MongoDB for streamlining the apartment search process.
- Implemented a NoSQL database architecture with MongoDB for efficient storage and JWT with role-based access control.
- Created a search functionality with filtering options for distance from campus and amenities to enhance user experience.

ACHIEVEMENTS

- Secured a scholarship of \$8000 for my master's program, in recognition of exceptional academic performance.
- One of the 11 students out of 500+ applicants to receive a US\$17000 Scholarship for bachelor's degree.
